- 3 Objective feedback

Laparoscopic Intestinal Tract Suture

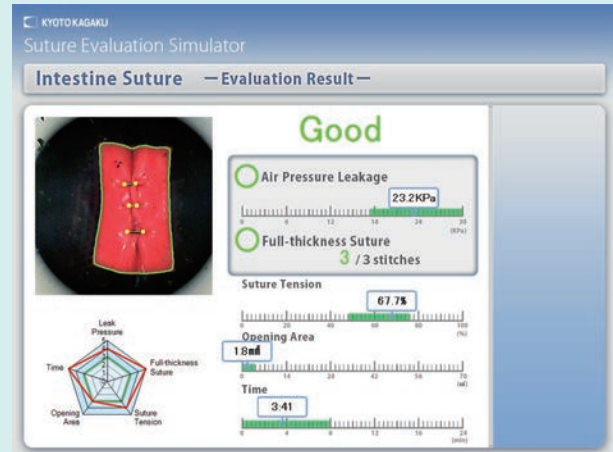

1 | Quantitative Feedback combined with Realistic Hands-on Experience

Judging success or failure

- 1 Is the wound sutured without a leak?
- 2 Is suture completed through muscular layer to mucosal layer?
- 3 Is ligature appropriate for suture?
- 4 How much open area is there in mucosal layer?
- 5 How long does it take for suturing procedure?

The system utilizes five criteria to evaluate laparoscopic suturing skills.

Each criteria has an "acceptable" range based on expert surgeons to help improve performance.

Air leak from the sutured area can be checked by applying air pressure on the intestinal tract sheet.

Human Anatomy Model Mr. A1A

The original A1A anatomical model was produced in 1964. At that time, other models in the market used to be stumpy, bulky and unrealistic. A1A was created to be an innovation with the most realistic, more close-to-human anatomies. As there was no preceding example available back then, one of our employees at that time stood in as its living model. With his physically toned right arm, the athletic pose of A1A was adapted. Thanks to his contribution, A1A had since become our long-standing seller. As of 2018, A1A has been reborn with its new and improved features.

A1A

Human Anatomy Torso (dual sex)

①Heart, frontal lungs and frontal diaphragm can be taken apart so that cross-sections and connecting organs can be seen.

②The stomach can be opened to see the inner structures.

③Improvements to the abdominal cover make the handling of the model much safer.

④Improvements to shape, cross-sections, colors and materials make anatomical understanding much easier.

A2D

Dissectible Anatomy of Arm (parts)

90 anatomical anecdotes are included in this model. Made of rigid plastic and is 27.2 inch high. It is mounted on a base with a supporting rod.

A3D

Dissectible Anatomy of Leg (parts)

This model made of rigid plastic is 36.2 inch high and can be separated into 27 parts. This model is mounted on a base, and the principal nerves and blood vessel systems are replicated in detail.

TM90-2

Junior Torso -Advanced Model-

This model is a very useful study aid for students and is a great illustration of the digestive system. It is made of flexible plastic, separates into 18 parts and is approximately 33.6 inches tall.

M42

Muscles of Arm

This model is a great tool for visualizing the functions of the joint and muscle of the elbow. The state of the muscle can be observed when the arm is stretched and bent.

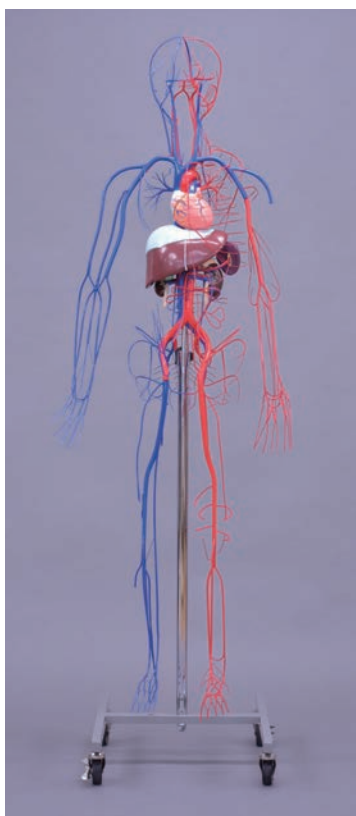

A144

Nerves and Vessels of Arm

A full replica of the arm's blood vessels and nerves. A great addition to education regarding intravenous procedures.

Circulatory System Model Life-sized

A61

Circulatory System Model

With arteries on the left and veins on the right, accurate relationship between the circulatory system and organs is displayed on this 47 inch model.

A62

Circulatory System with Skelton Model

This 47 inch, plastic model is mounted on a metal stand and replicates anatomies such as the cochlea, skeleton, blood vessels, brain, heart, liver, kidney and spleen.

A100

Nervous and Circulatory System

A thorough and convenient replica, with the circulatory system on the left and the nervous system on the right. Approximately 54 in. tall.

A25

Nervous System Model

The left half of the skull reveals the brain and the medulla oblongata. The nerves are fully shown, and the model is mounted on a metal stand for a total height of 51.2 in.

A120

Cerebral Arteries

This life-size replica of the brain arteries spreads over and into the cerebrum region. The cerebrum and the spinal bulb are accurately depicted. Model on a metal stand.

A48-1

Bronchus and Pulmonary Vessels Model

This model shows in detail the relation between the bronchus, the pulmonary arteries, and veins which clearly shows how the arteries and veins are distributed to the right and left lungs.

A59

Heart Anatomy B

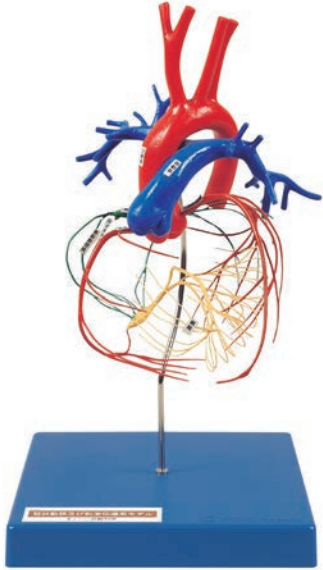

This life-sized heart is dissectible into 6 parts. The esophagus, trachea and aorta descending aorta are removable. Comes with anatomical anecdotes. Approx. 10 inches.

A142

Coronary Artery and Conducting System Model

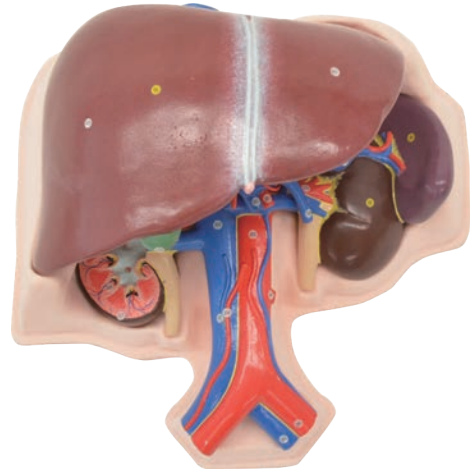

This model replicates the location of the impulse conducting system and coronary arteries in the human heart. It is useful for primary guidance in scientific education.

A69

Liver, Kidneys and Spleen Model

Life-size model, mounted on a base. Three organs are represented in visceral positions showing the principal blood vessels and nerves.

A71

Intestines Model

This model demonstrates a posterior view of the digestive system. The mesenteric vessels are shown in three parts: the cecum, the jejunum and the ileum. The model is composed of plastic.

A136

Coronary Arterial Model

Placed in a transparent case with angular gradations. A knob on the top rotates the model to demonstrate.
